

ProVal<sup>®</sup>  
by WinTech

Valuation and Projection Software for Pension Plans

# World's Leading Pension Software

## KEY BENEFITS

### Savings

In-house systems are generally more expensive than commercial solutions due to economies of scale which allow external systems to spread development costs across an entire industry. There are no additional fees for new releases or development projects that you ask us to do.

### Efficiency

You can produce work faster and at lower cost using ProVal, as we have implemented the best thinking and ideas from our clients around workflow, all the way from data preparation through report generation.

### Quality

ProVal's calculations and methodologies have been approved by chief actuaries around the world. The volume of daily activity ensures that any bugs are found and fixed quickly. We perform regression testing as part of our regular development routine and with every update and new release.

## KEY FEATURES

- Global in scope, with users in over 30 countries
- Data preparation tools designed to minimize effort
- Handles the most complex plan provisions and actuarial assumptions
- Calculates contributions and expense, not only liability values
- Glass box with an emphasis on transparency, it includes complete documentation as well as detailed sample life output for both valuations and projections
- Rule sets under each local regulatory environment as well as the common actuarial preferences that accompany them
- Integrated projections including deterministic and stochastic projections, LDI & glide paths
- Grid processing for very large jobs
- Gain/loss analysis, experience studies, APIs, report writer, and more
- World class training and support
- Dedicated conversion assistance
- Large actuarial talent pool of expert ProVal users

Launched in 1994, ProVal is WinTech's flagship defined benefit valuation software used worldwide by pension actuaries and investment professionals.
